# Outline

- 1 Context-Free Grammars
- 2 Pushdown Automata
- 3 Non-Context-Free Languages

# Context-Free Languages

regular languages 正则语言

- finite automata: DFA / NFA
- regular expressions

some simple languages, such as  $\{0^n 1^n \mid n \geq 0\}$ , are **not** regular languages.

# Context-Free Languages

regular languages 正则语言

- finite automata: DFA / NFA
- regular expressions

some simple languages, such as  $\{0^n 1^n \mid n \geq 0\}$ , are **not** regular languages.

context-free languages 上下文无关语言

- pushdown automata 下推自动机
- first used in the study of human languages
- in the specification and compilation of programming languages
  - *parser*
  - the construction of a parser from a context-free grammar

# Outline

## 1 Context-Free Grammars

- Formal Definition of a Context-Free Grammar
- Examples of a Context-Free Grammar
- Designing Context-Free Grammars
- Ambiguity
- Chomsky Normal Form

## 2 Pushdown Automata

## 3 Non-Context-Free Languages

# Context-Free Grammars 上下文无关文法

例 (context-free grammar:  $G_1$ )

$$A \rightarrow 0A1$$

$$A \rightarrow B$$

$$B \rightarrow \#$$

A grammar

- substitution rules, **productions** 产生式
- **variable** 变元
- **terminals** 终结符
- **start variable** 起始变元

# Context-Free Grammars 上下文无关文法

例 (context-free grammar:  $G_1$ )

$$A \rightarrow 0A1$$

$$A \rightarrow B$$

$$B \rightarrow \#$$

$G_1$  generates the string 000#111

## Derivation 推导

- The sequence of substitutions to obtain a string is called a **derivation**
- $A \Rightarrow 0A1 \Rightarrow 00A11 \Rightarrow 000A111 \Rightarrow 000B111 \Rightarrow 000\#111$

# Context-Free Grammars 上下文无关文法

## Derivation 推导

- $A \Rightarrow 0A1 \Rightarrow 00A11 \Rightarrow 000A111 \Rightarrow 000B111 \Rightarrow 000\#111$

*parse tree* 语法分析树

## Context-Free Grammars 上下文无关文法

## Derivation 推导

•  $A \Rightarrow 0A1 \Rightarrow 00A11 \Rightarrow 000A111 \Rightarrow 000B111 \Rightarrow 000\#111$

*parse tree* 语法分析树

# Context-Free Grammars 上下文无关文法

## Derivation 推导

- $A \Rightarrow 0A1 \Rightarrow 00A11 \Rightarrow 000A111 \Rightarrow 000B111 \Rightarrow 000\#111$

*parse tree* 语法分析树

# Context-Free Grammars 上下文无关文法

## Derivation 推导

- $A \Rightarrow 0A1 \Rightarrow 00A11 \Rightarrow 000A111 \Rightarrow 000B111 \Rightarrow 000\#111$

## *parse tree* 语法分析树

## *language of the grammar* 文法的语言

- $L(G_1)$ : the language of grammar  $G_1$

# Context-Free Grammars 上下文无关文法

## Derivation 推导

- $A \Rightarrow 0A1 \Rightarrow 00A11 \Rightarrow 000A111 \Rightarrow 000B111 \Rightarrow 000\#111$

## *parse tree* 语法分析树

## *language of the grammar* 文法的语言

- $L(G_1)$ : the language of grammar  $G_1$
- What is  $L(G_1)$ ?

## Context-Free Grammars 上下文无关文法

## Derivation 推导

- $A \Rightarrow 0A1 \Rightarrow 00A11 \Rightarrow 000A111 \Rightarrow 000B111 \Rightarrow 000\#111$

*parse tree* 语法分析树*language of the grammar* 文法的语言

- $L(G_1)$ : the language of grammar  $G_1$
- What is  $L(G_1)$ ?  $\{0^n\#1^n \mid n \geq 0\}$

# Context-Free Grammars 上下文无关文法

## *language of the grammar* 文法的语言

- $L(G_1)$ : the language of grammar  $G_1$
- What is  $L(G_1)$ ?  $\{0^n \# 1^n \mid n \geq 0\}$

## *context-free languages* (CFL) 上下文无关语言

- any language that can be generated by some context-free grammar

### Abbreviation

$A \rightarrow 0A1$  and  $A \rightarrow B$

$A \rightarrow 0A1 \mid B$

# Context-Free Grammars 上下文无关文法

## 例 (context-free grammar $G_2$ )

$\langle \text{SENTENCE} \rangle \rightarrow \langle \text{NOUN-PHRASE} \rangle \langle \text{VERB-PHRASE} \rangle$

$\langle \text{NOUN-PHRASE} \rangle \rightarrow \langle \text{CMPLX-NOUN} \rangle \mid \langle \text{CMPLX-NOUN} \rangle \langle \text{PREP-PHRASE} \rangle$

$\langle \text{VERB-PHRASE} \rangle \rightarrow \langle \text{CMPLX-VERB} \rangle \mid \langle \text{CMPLX-VERB} \rangle \langle \text{PREP-PHRASE} \rangle$

$\langle \text{PREP-PHRASE} \rangle \rightarrow \langle \text{PREP} \rangle \langle \text{CMPLX-NOUN} \rangle$

$\langle \text{CMPLX-NOUN} \rangle \rightarrow \langle \text{ARTICLE} \rangle \langle \text{NOUN} \rangle$

$\langle \text{CMPLX-VERB} \rangle \rightarrow \langle \text{VERB} \rangle \mid \langle \text{VERB} \rangle \langle \text{NOUN-PHRASE} \rangle$

$\langle \text{ARTICLE} \rangle \rightarrow a \mid the$

$\langle \text{NOUN} \rangle \rightarrow boy \mid girl \mid flower$

$\langle \text{VERB} \rangle \rightarrow touches \mid likes \mid sees$

$\langle \text{PREP} \rangle \rightarrow with$

a boy sees

the boy sees a flower

a girl with a flower likes the boy

# Context-Free Grammars 上下文无关文法

## Derivation

$\langle \text{SENTENCE} \rangle \Rightarrow \langle \text{NOUN-PHRASE} \rangle \langle \text{VERB-PHRASE} \rangle$   
 $\Rightarrow \langle \text{CMPLX-NOUN} \rangle \langle \text{VERB-PHRASE} \rangle$   
 $\Rightarrow \langle \text{ARTICLE} \rangle \langle \text{NOUN} \rangle \langle \text{VERB-PHRASE} \rangle$   
 $\Rightarrow a \langle \text{NOUN} \rangle \langle \text{VERB-PHRASE} \rangle$   
 $\Rightarrow a \text{ boy } \langle \text{VERB-PHRASE} \rangle$   
 $\Rightarrow a \text{ boy } \langle \text{CMPLX-VERB} \rangle$   
 $\Rightarrow a \text{ boy } \langle \text{VERB} \rangle$   
 $\Rightarrow a \text{ boy sees}$

# Formal Definition of a Context-Free Grammar

## 定义 (CFG (上下文无关文法))

# Formal Definition of a Context-Free Grammar

## 定义 (CFG (上下文无关文法))

A **context-free grammar** (CFG) is a 4-tuple  $(V, \Sigma, R, S)$ , where

# Formal Definition of a Context-Free Grammar

## 定义 (CFG (上下文无关文法))

A **context-free grammar** (CFG) is a 4-tuple  $(V, \Sigma, R, S)$ , where

- ①  $V$  is a finite set called the **variables**,

# Formal Definition of a Context-Free Grammar

## 定义 (CFG (上下文无关文法))

A **context-free grammar** (CFG) is a 4-tuple  $(V, \Sigma, R, S)$ , where

- ①  $V$  is a finite set called the **variables**,
- ②  $\Sigma$  is a finite set, disjoint from  $V$ , called the **terminals**,

# Formal Definition of a Context-Free Grammar

## 定义 (CFG (上下文无关文法))

A **context-free grammar** (CFG) is a 4-tuple  $(V, \Sigma, R, S)$ , where

- ①  $V$  is a finite set called the **variables**,
- ②  $\Sigma$  is a finite set, disjoint from  $V$ , called the **terminals**,
- ③  $R$  is the finite set of **rules**, with each rule being a variable and a string of variables and terminals, and

# Formal Definition of a Context-Free Grammar

## 定义 (CFG (上下文无关文法))

A **context-free grammar** (CFG) is a 4-tuple  $(V, \Sigma, R, S)$ , where

- 1  $V$  is a finite set called the **variables**,
- 2  $\Sigma$  is a finite set, disjoint from  $V$ , called the **terminals**,
- 3  $R$  is the finite set of **rules**, with each rule being a variable and a string of variables and terminals, and
- 4  $S \in V$  is the **start variable**.

# Formal Definition of a Context-Free Grammar

$u, v, w$  are strings of variables and terminals,

$A \rightarrow w$  is a rule of the grammar

# Formal Definition of a Context-Free Grammar

$u, v, w$  are strings of variables and terminals,

$A \rightarrow w$  is a rule of the grammar

- $uAv \Rightarrow uwv$ :  $uAv$  **yields**  $uwv$  直接推导

# Formal Definition of a Context-Free Grammar

$u, v, w$  are strings of variables and terminals,

$A \rightarrow w$  is a rule of the grammar

- $uAv \Rightarrow uwv$ :  $uAv$  **yields**  $uwv$  直接推导
- $u \xRightarrow{*} v$ :  $u$  **derives**  $v$  推导

# Formal Definition of a Context-Free Grammar

$u, v, w$  are strings of variables and terminals,

$A \rightarrow w$  is a rule of the grammar

- $uAv \Rightarrow uwv$ :  $uAv$  **yields**  $uwv$  直接推导
- $u \xRightarrow{*} v$ :  $u$  **derives**  $v$  推导
  - if  $u = v$  or

# Formal Definition of a Context-Free Grammar

$u, v, w$  are strings of variables and terminals,

$A \rightarrow w$  is a rule of the grammar

- $uAv \Rightarrow u w v$ :  $uAv$  **yields**  $u w v$  直接推导
- $u \xRightarrow{*} v$ :  $u$  **derives**  $v$  推导
  - if  $u = v$  or
  - if a sequence  $u_1, u_2, \dots, u_k$  exists for  $k \geq 0$  and
$$u \Rightarrow u_1 \Rightarrow u_2 \Rightarrow \dots \Rightarrow u_k \Rightarrow v$$

# Formal Definition of a Context-Free Grammar

$u, v, w$  are strings of variables and terminals,

$A \rightarrow w$  is a rule of the grammar

- $uAv \Rightarrow u w v$ :  $uAv$  **yields**  $u w v$  直接推导
- $u \xRightarrow{*} v$ :  $u$  **derives**  $v$  推导
  - if  $u = v$  or
  - if a sequence  $u_1, u_2, \dots, u_k$  exists for  $k \geq 0$  and
 
$$u \Rightarrow u_1 \Rightarrow u_2 \Rightarrow \dots \Rightarrow u_k \Rightarrow v$$

The **language of the grammar** is  $\{w \in \Sigma^* \mid S \xRightarrow{*} w\}$

# Formal Definition of a Context-Free Grammar

例 (context-free grammar:  $G_1$ )

$$G_1 = (V, \Sigma, R, S)$$

- $V = \{A, B\}$
- $\Sigma = \{0, 1, \#\}$
- $S = A$
- $R$ :

$$A \rightarrow 0A1$$

$$A \rightarrow B$$

$$B \rightarrow \#$$

# Formal Definition of a Context-Free Grammar

例 (context-free grammar:  $G_3$ )

$$G_3 = (\{S\}, \{a, b\}, R, S)$$

- $S \rightarrow aSb \mid SS \mid \varepsilon$

# Formal Definition of a Context-Free Grammar

例 (context-free grammar:  $G_4$ )

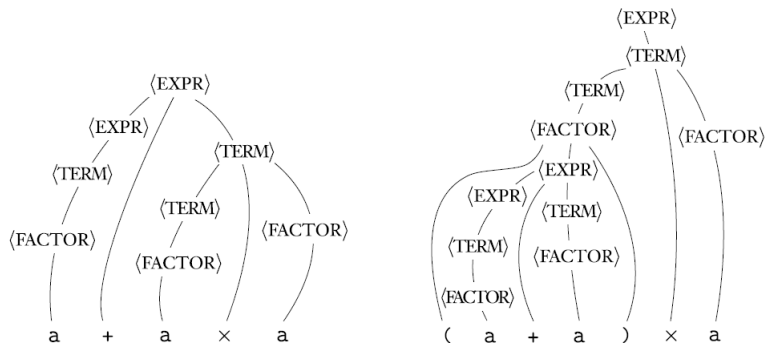

$$G_3 = (V, \Sigma, R, \langle \text{EXPR} \rangle)$$

- $V = \{\langle \text{EXPR} \rangle, \langle \text{TERM} \rangle, \langle \text{FACTOR} \rangle\}$
- $\Sigma = \{a, +, \times, (, )\}$
- $$\begin{aligned} \langle \text{EXPR} \rangle &\rightarrow \langle \text{EXPR} \rangle + \langle \text{TERM} \rangle \mid \langle \text{TERM} \rangle \\ \langle \text{TERM} \rangle &\rightarrow \langle \text{TERM} \rangle \times \langle \text{FACTOR} \rangle \mid \langle \text{FACTOR} \rangle \\ \langle \text{FACTOR} \rangle &\rightarrow (\langle \text{EXPR} \rangle) \mid a \end{aligned}$$

Two strings generated with grammar  $G_4$

- $a + a \times a$
- $(a + a) \times a$

# Formal Definition of a Context-Free Grammar

Parse tree for the strings  $a + a \times a$  and  $(a + a) \times a$

# Designing Context-Free Grammars

- 1 Many CFLs are the union of simpler CFLs

# Designing Context-Free Grammars

- 1 Many CFLs are the union of simpler CFLs

例

$$\{0^n 1^n \mid n \geq 0\} \cup \{1^n 0^n \mid n \geq 0\}$$

# Designing Context-Free Grammars

- 1 Many CFLs are the union of simpler CFLs

例

$$\{0^n 1^n \mid n \geq 0\} \cup \{1^n 0^n \mid n \geq 0\}$$

- $\{0^n 1^n \mid n \geq 0\}$ :  $S_1 \rightarrow 0S_11 \mid \varepsilon$
- $\{1^n 0^n \mid n \geq 0\}$ :  $S_2 \rightarrow 1S_20 \mid \varepsilon$

# Designing Context-Free Grammars

- ① Many CFLs are the union of simpler CFLs

例

$$\{0^n 1^n \mid n \geq 0\} \cup \{1^n 0^n \mid n \geq 0\}$$

- $\{0^n 1^n \mid n \geq 0\}$ :  $S_1 \rightarrow 0S_11 \mid \varepsilon$

- $\{1^n 0^n \mid n \geq 0\}$ :  $S_2 \rightarrow 1S_20 \mid \varepsilon$

$$S \rightarrow S_1 \mid S_2$$

$$S_1 \rightarrow 0S_11 \mid \varepsilon$$

$$S_2 \rightarrow 1S_20 \mid \varepsilon$$

# Designing Context-Free Grammars

- 2 Constructing a CFG for a language that happens to be regular

# Designing Context-Free Grammars

## ② Constructing a CFG for a language that happens to be regular

Convert any DFA into an equivalent CFG as follows

- Make a variable  $R_i$  for each state  $q_i$  of the DFA
- Add the rule  $R_i \rightarrow aR_j$  to the CFG if  $\delta(q_i, a) = q_j$  is a transition in the DFA
- Add the rule  $R_i \rightarrow \varepsilon$  if  $q_i$  is an accept state of the DFA
- Make  $R_0$  the start variable of the grammar, where  $q_0$  is the start state of the machine

# Designing Context-Free Grammars

③ Certain context-free languages contain strings with two substrings

- $\{0^n 1^n \mid n \geq 0\}$

- $R \rightarrow uRv$

# Designing Context-Free Grammars

3 Certain context-free languages contain strings with two substrings

- $\{0^n 1^n \mid n \geq 0\}$

- $R \rightarrow uRv$

4 The strings may contain certain structures that appear recursively as part of other (or the same) structures

- the grammar that generates arithmetic expressions

# Ambiguity 二义性

Sometimes a grammar can generate the same string in several different ways

# Ambiguity 二义性

Sometimes a grammar can generate the same string in several different ways

Such a string will have several different parse trees and thus several different meanings

# Ambiguity 二义性

Sometimes a grammar can generate the same string in several different ways

Such a string will have several different parse trees and thus several different meanings

- If a grammar generates the same string in several different ways, we say that the string is derived ***ambiguously*** in that grammar
- If a grammar generates some string ambiguously, we say that the grammar is ***ambiguous***

# Ambiguity

例 (Grammar  $G_5$ )

$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$

# Ambiguity

例 (Grammar  $G_5$ )

$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$

This grammar generates the string  $a+a \times a$  ***ambiguously***

# Ambiguity

例 (Grammar  $G_5$ )

$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$

This grammar generates the string  $a+a \times a$  **ambiguously**

The two parse trees for the string  $a+a \times a$  in grammar  $G_5$

# Ambiguity

## 例 (Grammar $G_5$ )

$$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$$

- This grammar doesn't capture the usual precedence relations and so may group the  $+$  before the  $\times$  or vice versa.
- Grammar  $G_4$  generates exactly the same language, but every generated string has a unique parse tree.

# Ambiguity

## 例 (Grammar $G_5$ )

$$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$$

- This grammar doesn't capture the usual precedence relations and so may group the  $+$  before the  $\times$  or vice versa.
- Grammar  $G_4$  generates exactly the same language, but every generated string has a unique parse tree.
- $G_4$  is unambiguous.
- $G_5$  is ambiguous.

# Ambiguity

## 例 (Grammar $G_5$ )

$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$

- This grammar doesn't capture the usual precedence relations and so may group the  $+$  before the  $\times$  or vice versa.
- Grammar  $G_4$  generates exactly the same language, but every generated string has a unique parse tree.
- $G_4$  is unambiguous.
- $G_5$  is ambiguous.

What about the grammar  $G_2$ ? Is it ambiguous?

the girl touches the boy with the flower

# Ambiguity

## 例 (Grammar $G_5$ )

$$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$$

- This grammar doesn't capture the usual precedence relations and so may group the  $+$  before the  $\times$  or vice versa.
- Grammar  $G_4$  generates exactly the same language, but every generated string has a unique parse tree.

# Ambiguity

## 例 (Grammar $G_5$ )

$$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$$

- This grammar doesn't capture the usual precedence relations and so may group the  $+$  before the  $\times$  or vice versa.
- Grammar  $G_4$  generates exactly the same language, but every generated string has a unique parse tree.
- $G_4$  is unambiguous.
- $G_5$  is ambiguous.

# Ambiguity

## 例 (Grammar $G_5$ )

$\langle \text{EXPR} \rangle \rightarrow \langle \text{EXPR} \rangle + \langle \text{EXPR} \rangle \mid \langle \text{EXPR} \rangle \times \langle \text{EXPR} \rangle \mid (\langle \text{EXPR} \rangle) \mid a$

- This grammar doesn't capture the usual precedence relations and so may group the  $+$  before the  $\times$  or vice versa.
- Grammar  $G_4$  generates exactly the same language, but every generated string has a unique parse tree.
- $G_4$  is unambiguous.
- $G_5$  is ambiguous.

What about the grammar  $G_2$ ? Is it ambiguous?

the girl touches the boy with the flower

# Ambiguity

## 定义 (leftmost derivation (最左推导))

A derivation of a string  $w$  in a grammar  $G$  is a **leftmost derivation** if at every step the leftmost remaining variable is the one replaced.

# Ambiguity

## 定义 (leftmost derivation (最左推导))

A derivation of a string  $w$  in a grammar  $G$  is a **leftmost derivation** if at every step the leftmost remaining variable is the one replaced.

## 定义 (ambiguity (二义性))

- A string  $w$  is derived **ambiguously** in context-free grammar  $G$  if it has **two or more** different **leftmost derivations**.
- Grammar  $G$  is **ambiguous** if it generates some string ambiguously.

# Ambiguity

## 定义 (leftmost derivation (最左推导))

A derivation of a string  $w$  in a grammar  $G$  is a **leftmost derivation** if at every step the leftmost remaining variable is the one replaced.

## 定义 (ambiguity (二义性))

- A string  $w$  is derived **ambiguously** in context-free grammar  $G$  if it has **two or more** different **leftmost derivations**.
- Grammar  $G$  is **ambiguous** if it generates some string ambiguously.

Some context-free languages can be generated only by ambiguous grammars. Such languages are called **inherently ambiguous** (固有二义性). e.g.,  $\{a^i b^j c^k \mid i = j \text{ or } j = k\}$

# Chomsky Normal Form 乔姆斯基范式

## 定义 (Chomsky Normal Form (乔姆斯基范式))

A context-free grammar is in **Chomsky normal form** if every rule is of the form

$$A \rightarrow BC$$

$$B \rightarrow a$$

- where  $a$  is any terminal and  $A$ ,  $B$ , and  $C$  are any variables,
- except that  $B$  and  $C$  may not be the start variable.
- permit the rule  $S \rightarrow \varepsilon$ , where  $S$  is the start variable.

# Chomsky Normal Form 乔姆斯基范式

## 定理

*Any context-free language is generated by a context-free grammar in Chomsky normal form.*

# Chomsky Normal Form 乔姆斯基范式

## 定理

*Any context-free language is generated by a context-free grammar in Chomsky normal form.*

## Proof idea:

# Chomsky Normal Form 乔姆斯基范式

## 定理

*Any context-free language is generated by a context-free grammar in Chomsky normal form.*

## Proof idea:

Rules that violate the conditions are replaced with equivalent ones that are satisfactory

- 1 add a new start variable

# Chomsky Normal Form 乔姆斯基范式

## 定理

*Any context-free language is generated by a context-free grammar in Chomsky normal form.*

## Proof idea:

Rules that violate the conditions are replaced with equivalent ones that are satisfactory

- 1 add a new start variable
- 2 eliminate all  $\varepsilon$ -**rules** of the form  $A \rightarrow \varepsilon$

# Chomsky Normal Form 乔姆斯基范式

## 定理

*Any context-free language is generated by a context-free grammar in Chomsky normal form.*

## Proof idea:

Rules that violate the conditions are replaced with equivalent ones that are satisfactory

- ① add a new start variable
- ② eliminate all  $\varepsilon$ -**rules** of the form  $A \rightarrow \varepsilon$
- ③ eliminate all **unit rules** of the form  $A \rightarrow B$

# Chomsky Normal Form 乔姆斯基范式

## 定理

*Any context-free language is generated by a context-free grammar in Chomsky normal form.*

## Proof idea:

Rules that violate the conditions are replaced with equivalent ones that are satisfactory

- 1 add a new start variable
- 2 eliminate all  $\varepsilon$ -**rules** of the form  $A \rightarrow \varepsilon$
- 3 eliminate all **unit rules** of the form  $A \rightarrow B$
- 4 convert the remaining rules into the proper form

# Chomsky Normal Form 乔姆斯基范式

## Proof

- 1 add a new start variable

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ① add a new start variable
  - add a new start variable  $S_0$  and the rule  $S_0 \rightarrow S$ , where  $S$  was the original start variable.

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ① add a new start variable
  - add a new start variable  $S_0$  and the rule  $S_0 \rightarrow S$ , where  $S$  was the original start variable.
  - This change guarantees that the start variable doesn't occur on the right-hand side of a rule.

# Chomsky Normal Form 乔姆斯基范式

## Proof

- 2 eliminate all  $\varepsilon$ -rules of the form  $A \rightarrow \varepsilon$

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ② eliminate all  $\varepsilon$ -rules of the form  $A \rightarrow \varepsilon$ 
  - remove an  $\varepsilon$ -rule  $A \rightarrow \varepsilon$ , where  $A$  is not the start variable.

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ② eliminate all  $\varepsilon$ -rules of the form  $A \rightarrow \varepsilon$ 
  - remove an  $\varepsilon$ -rule  $A \rightarrow \varepsilon$ , where  $A$  is not the start variable.
  - for each occurrence of an  $A$  on the right-hand side of a rule, add a new rule with that occurrence deleted.

# Chomsky Normal Form 乔姆斯基范式

## Proof

② eliminate all  $\varepsilon$ -rules of the form  $A \rightarrow \varepsilon$

- remove an  $\varepsilon$ -rule  $A \rightarrow \varepsilon$ , where  $A$  is not the start variable.
- for each occurrence of an  $A$  on the right-hand side of a rule, add a new rule with that occurrence deleted.
- $R \rightarrow uAv \Rightarrow R \rightarrow uv$
- $R \rightarrow uAvAw \Rightarrow R \rightarrow uvAw, R \rightarrow uAvw, \text{ and } R \rightarrow uvw$

# Chomsky Normal Form 乔姆斯基范式

## Proof

② eliminate all  $\varepsilon$ -rules of the form  $A \rightarrow \varepsilon$

- remove an  $\varepsilon$ -rule  $A \rightarrow \varepsilon$ , where  $A$  is not the start variable.
- for each occurrence of an  $A$  on the right-hand side of a rule, add a new rule with that occurrence deleted.
- $R \rightarrow uAv \Rightarrow R \rightarrow uv$
- $R \rightarrow uAvAw \Rightarrow R \rightarrow uvAw, R \rightarrow uAvw, \text{ and } R \rightarrow uvw$
- If we have the rule  $R \rightarrow A$ , add  $R \rightarrow \varepsilon$  unless the rule  $R \rightarrow \varepsilon$  was previously removed.

# Chomsky Normal Form 乔姆斯基范式

## Proof

② eliminate all  $\varepsilon$ -rules of the form  $A \rightarrow \varepsilon$

- remove an  $\varepsilon$ -rule  $A \rightarrow \varepsilon$ , where  $A$  is not the start variable.
- for each occurrence of an  $A$  on the right-hand side of a rule, add a new rule with that occurrence deleted.
- $R \rightarrow uAv \Rightarrow R \rightarrow uv$
- $R \rightarrow uAvAw \Rightarrow R \rightarrow uvAw, R \rightarrow uAvw, \text{ and } R \rightarrow uvw$
- If we have the rule  $R \rightarrow A$ , add  $R \rightarrow \varepsilon$  unless the rule  $R \rightarrow \varepsilon$  was previously removed.
- repeat these steps until we eliminate all  $\varepsilon$ -rules not involving the start variable

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ③ eliminate all unit rules of the form  $A \rightarrow B$

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ③ eliminate all unit rules of the form  $A \rightarrow B$ 
  - remove a unit rule  $A \rightarrow B$

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ③ eliminate all unit rules of the form  $A \rightarrow B$ 
  - remove a unit rule  $A \rightarrow B$
  - whenever a rule  $B \rightarrow u$  appears, we add the rule  $A \rightarrow u$  unless this was a unit rule previously removed.

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ③ eliminate all unit rules of the form  $A \rightarrow B$ 
  - remove a unit rule  $A \rightarrow B$
  - whenever a rule  $B \rightarrow u$  appears, we add the rule  $A \rightarrow u$  unless this was a unit rule previously removed.
  - repeat these steps until we eliminate all unit rules.

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ④ convert the remaining rules into the proper form

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ④ convert the remaining rules into the proper form
  - replace each rule  $A \rightarrow u_1 u_2 \cdots u_k$ ,  
with the rules  $A \rightarrow u_1 A_1$ ,  $A_1 \rightarrow u_2 A_2$ ,  $A_2 \rightarrow u_3 A_3$ ,  $\cdots$ , and  
 $A_{k-2} \rightarrow u_{k-1} u_k$ 
    - where  $k \geq 3$
    - each  $u_i$  is a variable or terminal symbol
    - $A_i$ 's are new variables

# Chomsky Normal Form 乔姆斯基范式

## Proof

- ④ convert the remaining rules into the proper form
  - replace each rule  $A \rightarrow u_1 u_2 \cdots u_k$ ,  
with the rules  $A \rightarrow u_1 A_1$ ,  $A_1 \rightarrow u_2 A_2$ ,  $A_2 \rightarrow u_3 A_3$ ,  $\cdots$ , and  $A_{k-2} \rightarrow u_{k-1} u_k$ 
    - where  $k \geq 3$
    - each  $u_i$  is a variable or terminal symbol
    - $A_i$ 's are new variables
  - replace any terminal  $u_i$  in the preceding rule(s) with the new variable  $U_i$  and add the rule  $U_i \rightarrow u_i$

## 例

Let  $G_6$  be the following CFG and convert it to Chomsky normal form by using the conversion procedure just given.

- 1 The original CFG  $G_6$  is shown on the left. The result of applying the first step to make a new start variable appears on the right.

$$S \rightarrow ASA \mid aB$$

$$A \rightarrow B \mid S$$

$$B \rightarrow b \mid \varepsilon$$
