Xin Wang(TJU) 1 概述 September 20, 2024

The Theory of Computation 计算理论

What are the fundamental capabilities and limitations of computers?

• This question goes back to the 1930s when mathematical logicians first began to explore the meaning of computation.

Xin Wang(TJU) 1 概述 September 20, 2024

The Theory of Computation 计算理论

What are the fundamental capabilities and limitations of computers?

- This question goes back to the 1930s when mathematical logicians first began to explore the meaning of computation.
- Automata (自动机)
- Computability (可计算性)
- Complexity (复杂度)

14 / 50

Xin Wang(TJU) 1 概述 September 20, 2024

Complexity Theory 复杂度理论

Computer problems

- Easier: e.g., the sorting problem
- Harder: e.g., the scheduling problem

Complexity Theory 复杂度理论

Computer problems

- Easier: e.g., the sorting problem
- Harder: e.g., the scheduling problem

What makes some problems computationally hard and others easy?

- This is the central question of complexity theory.
- We don't know the answer to it. (researched for over 40 years!)
 - An elegant scheme for classifying problems according to their computational difficulty (analogous to the periodic table)

Xin Wang(TJU) 1 概述 September 20, 2024 15 / 50

Complexity Theory

Confront a computationally hard problem

- Find which aspect of the problem is at the root of the difficulty.
 - Alter it so that the problem is more easily solvable.
- 2 Settle for less than a perfect solution to the problem.
 - Find solutions that only approximate the perfect one is easy.
- Hard only in the worst case situation, but easy most of the time.
 - A procedure that occasionally is slow but usually runs quickly.
- Consider alternative types of computation
 - Such as randomized computation.

Xin Wang(TJU) 1 概述 September 20, 2024 16 / 50

Computability Theory 可计算性理论

Certain basic problems cannot be solved by computers!

• Determine whether a mathematical statement is true or false.

Computability and Complexity are closely related.

- The objective of complexity theory
 - classify problems as easy ones and hard ones
- The objective of computability theory
 - classify problems as solvable ones and unsolvable ones

Kurt Gödel (1906–1978)

Alan Turing (1912-1954)

Automata Theory 自动机理论

The definitions and properties of mathematical models of computation!

Models of computation

The theories of computability and complexity require a precise definition of a computer.

- Models of computation
 - Finite Automaton (有限自动机)
 - Context-Free Grammar (上下文无关文法)
 - Others

Theoretical models of computers help the construction of actual computers.

Xin Wang(TJU) 1 概述 September 20, 2024 18 / 50

几则书评

etone **** 2008-03-08 04:38:47

我们为什么要学习计算理论

在所有我看过的计算理论。可计算性、计算复杂度的教材中,Sipser的这本Introduction to the Theory of Computation 是最适合入门的。把计算理论这么个艰深的学问讲解得清晰简洁,直观易懂。而且涵盖了计算理论的各个经典内容。 作为一本introduction, 真是再好不过了。 计算理论... (加载中...)

劉 平凡的老鱼★★★★★ 2009-03-09 15:19:17

4□ > 4□ > 4□ > 4□ > 4□ > □

很不错的关于计算理论的介绍

事知其然而后知其所以然。 现代计算机体系的构建,图灵机的数学模型的实现,正是指出了这道创世纪的光。 现在书 里面的内容已经忘记的差不多了,只是记得不断的证明,一步步的证明,充满了智慧的光芒。总之,是一本好的数学 书。(加载中...)

陈炬★★★★★ 2009-03-19 11:11:59

CS学生必读书籍

让人了解计算机的本质,它的能力与它的局限性。 计算理论课的教材,上课上的很累,但很有收获。我觉得没读过这 本书的不好意思说自己是Computer Science专业毕业的。(加载中...)

Xin Wang (TJU) 1 概述 September 20, 2024 19 / 50

几则书评

然而,尽管我对这本书和这门学问都很推崇,我对于学习计算理论的必要性却并不坚定。我自己喜欢这些,可我该如何向别人解释学习它是必要的?

Sipser在前言中也试图说明这个问题:"After all, isn't theory arcane, boring, and worst of all, irrelevant?"

他很认真的试图从几个方面说服学生,计算理论是"有用"的,但我总觉得这些说服很徒劳:书中的三个部分,对于搞研究的人来说,前两个领域已经或走到头了或不再是主流研究趣味了,只有复杂度尚活跃,但也只是个理论方向之一;而对于那些有志于业界工作的学生,后两个部分几乎永远不会在工作中用到,而只有第一部分的自动机,可能会用到一点点正则表达式。

看来,从"有用"这个方向去为计算理论辩护,难免会遭遇尴尬和勉强。

我能想到的理由就只剩两个:

- (一) 这些是计算机科学的根本,没有它们计算机科学不能算作是个正经学问,因此,一个自 称计算机科学专业的人,应当知道这些。
 - (二) 这些是美好的, 值得在短暂的人生中去经历去见识。

我觉得这已是足够的理由了。

Outline

- Mathematical Notions and Terminology
 - Sets
 - Sequences and Tuples
 - Functions and Relations
 - Strings and Languages

21 / 50

Xin Wang (TJU) 1 概述

Sets 集合

A **set** is a group of objects represented as a unit.

$$S = \{7, 21, 25\}$$

- *elements* or *members*: the objects in a set. $7 \in \{7, 21, 25\}$, $8 \notin \{7, 21, 25\}$
- **subset**: $A \subseteq B$, proper subset: $A \subseteq B$
- natural numbers: \mathcal{N} , integers \mathcal{Z}
- empty set: Ø
- $\{n \mid n = m^2 \text{ for some } m \in \mathcal{N}\}$
- union $A \cup B$, intersection $A \cap B$, complement \overline{A}
- **power set** of $A = \{0, 1\}$: the set of all subsets of $A = \{\emptyset, \{0\}, \{1\}, \{0, 1\}\}$.

Xin Wang(TJU) 1 概述 September 20, 2024 22 / 50

Sequences and Tuples 序列和元组

A sequence of objects is a list of these objects in some order.

(7, 21, 57)

• The order and repetition do matter in a sequence.

Finite sequences often are called *tuples*.

- k-tuple: a sequence with k elements. (7, 21, 57) is a 3-tuple.
- ordered pair: a 2-tuple.
- Cartesian product of A and B: $A \times B = \{(a, b) \mid a \in A \text{ and } b \in B\}.$

Xin Wang(TJU) 1 概述 September 20, 2024 23 / 50

Functions 函数

A function is an object that sets up an input-output relationship.

- In every function, the same input always produces the same output.
- A function also is called a mapping.

$$f(a) = b$$

- domain: the set of possible inputs to the function.
- range: the set of outputs of a function.

$$f:D\to R$$

• onto the range: a function that does use all the elements of the range.

Xin Wang(TJU) 1 概述 September 20, 2024 24 / 50

Functions

例

- Let $\mathcal{Z}_m = \{0, 1, 2, \dots, m-1\}.$
- $g: \mathcal{Z}_4 \times \mathcal{Z}_4 \to \mathcal{Z}_4$

g	0	1	2	3
0	0	1	2	3
1 2	1 2	2	3	0
2	2	3	0	1
3	3	0	1	2

25 / 50

Functions

例

• Let
$$\mathcal{Z}_m = \{0, 1, 2, \dots, m-1\}.$$

$$\bullet$$
 $q: \mathcal{Z}_4 \times \mathcal{Z}_4 \to \mathcal{Z}_4$

The function q is the addition function modulo 4.

25 / 50

Functions

- k-ary function: a function with k arguments. k: arity
- unary function: k = 1.
- binary function: k=2.
- predicate or property: a function whose range is {TRUE, FALSE}.

Xin Wang(TJU) 1 概述 September 20, 2024 26 / 50

Relations 关系

A relation, a k-ary relation, or a k-ary relation on A is a property whose domain is a set of k-tuples $A \times \cdots \times A$.

- binary relation: a 2-ary relation.
- If R is a binary relation, the statement aRb means that $aRb = \mathsf{TRUE}$.

equivalence relation: a binary relation R is an equivalence relation if R satisfies three conditions:

- **1** R is reflexive if for every x, xRx
- 2 R is symmetric if for every x and y, xRy implies yRx
- 3 R is transitive if for every x, y, and z, xRy and yRz implies xRz

Xin Wang(TJU) 1 概述 September 20, 2024 27/50

Alphabets 字母表

- We define an alphabet to be any nonempty finite set.
- The members of the alphabet are the symbols of the alphabet.

例

- $\Sigma_1 = \{0, 1\}$
- $\bullet \ \Sigma_2 = \{\mathtt{a},\mathtt{b},\mathtt{c},\mathtt{d},\mathtt{e},\mathtt{f},\mathtt{g},\mathtt{h},\mathtt{i},\mathtt{j},\mathtt{k},\mathtt{l},\mathtt{m},\mathtt{n},\mathtt{o},\mathtt{p},\mathtt{q},\mathtt{r},\mathtt{s},\mathtt{t},\mathtt{u},\mathtt{v},\mathtt{w},\mathtt{x},\mathtt{y},\mathtt{z}\}$
- $\Gamma = \{0, 1, x, y, z\}$

28 / 50

Xin Wang(TJU) 1 概述 September 20, 2024

Strings 字符串

A string over an alphabet is a finite sequence of symbols from that alphabet.

例

- $\Sigma_1 = \{0, 1\}$, 01001 is a string over Σ_1
- $\Sigma_2 = \{a, b, c, \dots, z\}$, abracadabra is a string over Σ_2
- If w is a string over Σ , the length of w, written |w|, is the number of symbols that it contains.
- empty string: the string of length zero, written ε .
- If |w| = n, then $w = a_1 a_2 \cdots a_n$, where $a_i \in \Sigma$.
- the reverse of w: written $w^{\mathcal{R}}$, is $w^{\mathcal{R}} = a_n a_{n-1} \cdots a_1$

Xin Wang (TJU) 1 概述 September 20, 2024 29 / 50

Strings

- substring: String z is a substring of w if z appears consecutively within w.
- cad is a substring of abracadabra
- \bullet concatenation of string x and string y, written xy
 - $\bullet \ |x|=m \ \mathrm{and} \ |y|=n$
 - the concatenation of x and y is $x_1 \cdots x_m y_1 \cdots y_n$
 - ullet To concatenate a string with itself, use the notation x^k to mean

$$\overbrace{xx\cdots x}^k$$

Xin Wang(TJU) 1 概述 September 20, 2024 30 / 50

Languages 语言

- The lexicographic order of strings is the same as the familiar dictionary order.
- shortlex order or string order is identical to lexicographic order, except that shorter strings precede longer strings.
 - the string order of all strings over {0,1} is $(\varepsilon, 0, 1, 00, 01, 10, 11, 000, \dots)$

Xin Wang (TJU) 1 概述 September 20, 2024

Languages 语言

- The lexicographic order of strings is the same as the familiar dictionary order.
- shortlex order or string order is identical to lexicographic order, except that shorter strings precede longer strings.
 - the string order of all strings over $\{0,1\}$ is $(\varepsilon,0,1,00,01,10,11,000,\dots)$
- String x is a prefix of string y if a string z exists where xz = y.
- x is a proper prefix of y if in addition $x \neq y$.

Xin Wang(TJU) 1 概述 September 20, 2024 31/50

Languages 语言

- The lexicographic order of strings is the same as the familiar dictionary order.
- shortlex order or string order is identical to lexicographic order, except that shorter strings precede longer strings.
 - the string order of all strings over $\{0,1\}$ is $(\varepsilon,0,1,00,01,10,11,000,\dots)$
- String x is a prefix of string y if a string z exists where xz = y.
- x is a proper prefix of y if in addition $x \neq y$.

A language is a set of strings.

• A language is prefix-free if no member is a proper prefix of another member.

Xin Wang (TJU) 1 概述 September 20, 2024 31 / 50

定义 (语言的连接)

设 L_1 为字母表 Σ_1 上的语言, L_2 为字母表 Σ_2 上的语言, L_1 和 L_2 的<mark>连接 L_1L_2 由下式定义</mark>:

$$L_1 L_2 = \{ xy \mid x \in L_1, y \in L_2 \}$$

例

设
$$\Sigma_1=\{a,b\}$$
, $\Sigma_2=\{0,1\}$, $L_1=\{ab,ba,bb\}$, $L_2=\{00,11\}$, 则
$$L_1L_2=\{ab00,ab11,ba00,ba11,bb00,bb11\}$$

Xin Wang(TJU) 1 概述 September 20, 2024 32 / 50

定义(语言的闭包)

语言 L 的闭包记作 L^* ,定义如下:

- **1** $L^0 = \{ \varepsilon \}$;
- ② 对于 $n \ge 1$, $L^n = LL^{n-1}$;
- $L^* = \bigcup_{n>0} L^n$.

语言 L 的正闭包记作 L^+ ,定义为 $L^+ = \bigcup_{n>1} L^n$ 。

33 / 50

Xin Wang(TJU) September 20, 2024

例(语言的闭包)

设
$$\Sigma=\{0,1\}$$
, $L=\{10,01\}$, 则 $L^0=\{\varepsilon\}$, $L^1=L=\{10,01\}$ $L^2=LL=\{1010,1001,0110,0101\}$, \cdots , $L^*=\{\varepsilon,10,01,1010,1001,0110,0101,101010,100110,100101,\cdots\}$

◆ロト ◆部 ト ◆ 恵 ト ◆ 恵 ・ り へ ○

34 / 50

Xin Wang(TJU) September 20, 2024

字母表 Σ 本身也是 Σ 上的语言。

- Σ^+ : 由 Σ 中的字符组成的全体字符串的集合(不包括 ε)
- $\Sigma^* = \Sigma^+ \cup \{\varepsilon\}$

例

设
$$\Sigma = \{0,1\}$$
, 则

 $\Sigma^* = \{\varepsilon, 0, 1, 00, 01, 10, 11, 000, 001, 010, 011, 100, 101, 110, 111, \cdots\}$

由 0 和 1 组成的一切长度、一切次序的串(包括空串)。

35 / 50

Outline

- 1 Automata, Computability, and Complexity
- 2 Mathematical Notions and Terminology
- 3 Definitions, Theorems, and Proofs
 - Finding Proofs
- Types of Proof

Xin Wang (TJU)

Definitions, Theorems, and Proofs 定义、定理和证明

- Definitions describe the objects and notions that we use.
 - Precision is essential to any mathematical definition.
- Mathematical statements
 - The statement may or may not be true.
- A proof is a convincing logical argument that a statement is true
 - A murder trial demands proof "beyond any reasonable doubt".
 - A mathematician demands proof beyond any doubt.
- A theorem is a mathematical statement proved true.
 - lemmas: statements that assist in the proof of another, more significant statement.
 - corollaries of the theorem: a theorem or its proof may allow us to conclude easily that other, related statements are true.

Xin Wang (TJU) 1 概述 September 20, 2024 37 / 50

Finding Proofs

- Carefully read the statement you want to prove.
 - Do you understand all the notation?
 - Rewrite the statement in your own words.
 - Break it down and consider each part separately.

Multipart statements

- P if and only if Q or P iff Q or $P \iff Q$ (Both P and Q are mathematical statements.)
 - P only if Q: If P is true, then Q is true, written $P \Rightarrow Q$
 - $\bullet \ P \ \text{if} \ Q \hbox{:} \ \text{If} \ Q \ \text{is true, then} \ P \ \text{is true, written} \ P \Leftarrow Q \\$
- Two sets A and B are equal.
 - ullet A is a subset of B or $A\subseteq B$
 - ullet B is a subset of A or $B \subseteq A$

Finding Proofs

- When you want to prove a statement or part thereof, try to get an intuitive, "gut" feeling of why it should be true.
 - Experimenting with examples is especially helpful.
 - Try to find a counterexample.
 - Seeing where you run into difficulty when you attempt to find a counterexample
- When that you have found the proof, you must write it up properly.
 - A well-written proof is a sequence of statements,
 - each one follows by simple reasoning from previous statements.
 - Be patient.
 - Come back to it.
 - Be neat.
 - Be concise.

Xin Wang (TJU) 1 概述 September 20, 2024 39 / 50

Outline

- Automata, Computability, and Complexity
- 2 Mathematical Notions and Terminology
- 3 Definitions, Theorems, and Proofs
- Types of Proof
 - Proof by Construction
 - Proof by Contradiction
 - Proof by Induction

Proof by Construction 构造性证明

- Proof by Construction
 - Many theorems state that a particular type of object exists.
 - Demonstrating how to construct the object.

定义

We define a graph to be k-regular if every node in the graph has degree k.

定理

For each even number n greater than 2, there exists a 3-regular graph with n nodes.

Xin Wang (TJU) 1 概述 September 20, 2024 41 / 50

Proof by Construction 构造性证明

定理

For each even number n greater than 2, there exists a 3-regular graph with n nodes.

Proof.

- Let n be an even number greater than 2.
- Construct graph G = (V, E) with n nodes as follows.
- The set of nodes of G is $V = \{0, 1, ..., n-1\}$
- and the set of edges of G is the set

$$\begin{array}{ll} E & = & \{(i,i+1) \mid \text{for } 0 \leq i \leq n-2\} \cup \{(n-1,0)\} \\ \\ & \cup \{(i,i+n/2) \mid \text{for } 0 \leq i \leq n/2-1\} \end{array}$$

Xin Wang (TJU) 1 概述 September 20, 2024 42 / 50

Proof by Contradiction 反证法

- Proof by Contradiction
 - Assume that the theorem is false.
 - and then show that this assumption leads to an obviously false consequence, called a contradiction.

定理

 $\sqrt{2}$ is irrational.

Proof.

- Assume that $\sqrt{2}$ is rational. Thus $\sqrt{2}=\frac{m}{n}$
- where m and n are integers. If both m and n are divisible by the same integer greater than 1, divide both by the largest such integer.
- Doing so doesn't change the value of the fraction.

Proof by Contradiction 反证法

定理

 $\sqrt{2}$ is irrational.

Proof.

- Assume that $\sqrt{2}$ is rational. Thus $\sqrt{2} = \frac{m}{2}$
- ullet where m and n are integers. If both m and n are divisible by the same integer greater than 1, divide both by the largest such integer.
- Doing so doesn't change the value of the fraction.
- Now, at least one of m and n must be an odd number.
- $n\sqrt{2} = m \Rightarrow 2n^2 = m^2 \Rightarrow m^2$ is even. $\Rightarrow m$ is even.
- m=2k for some integer $k. \Rightarrow 2n^2=4k^2 \Rightarrow n^2=2k^2 \Rightarrow n$ is even.

1 概述

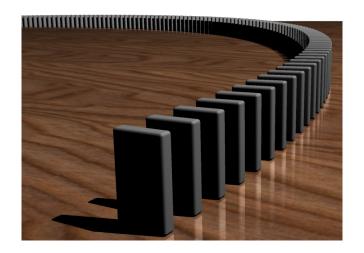

Proof by Induction 归纳法

Proof by Induction

- An advanced method used to show that all elements of an infinite set have a specified property.
- Basis: Prove that $\mathcal{P}(1)$ is true.
- Induction step: For each $i \geq 1$, assume that $\mathcal{P}(i)$ is true and use this assumption to show that $\mathcal{P}(i+1)$ is true.
 - $\mathcal{P}(i)$ is true is called the induction hypothesis.
 - A stronger induction hypothesis: $\mathcal{P}(j)$ is true for every $j \leq i$.
 - When we want to prove that $\mathcal{P}(i+1)$ is true, we have already proved that $\mathcal{P}(j)$ is true for every $j \leq i$.

证明与结构有关的命题,多数是递归定义的

定义

- (1) 任意数字或字母都是表达式;
- (2) 如果 E 或 F 是表达式,则 E+F,E*F 和 (E) 也都是表达式;
- (3) 表达式只能通过(1)、(2) 两条给出。

→ 4 = → = ✓ ○ ○ ○

定理

由前面定义的每个表达式中,左括号的个数一定等于右括号的个数。

48 / 50

Xin Wang(TJU) 1 概述 September 20, 2024

Proof.

归纳基础:按照(1),表达式只包含单个数字或字母,没有括号, 左括号和右括号个数均为 0, 当然相等。

49 / 50

Xin Wang (TJU) 1 概述 September 20, 2024

Proof.

归纳基础:按照(1),表达式只包含单个数字或字母,没有括号,

左括号和右括号个数均为 0. 当然相等。

归纳步骤:设表达式 B 是通过 (2) 构造出来的,有 3 种构造方法:

(1) B = E + F; (2) B = E * F; (3) $B = (E)_{\circ}$

设表达式 $E \setminus F$ 包含的左、右括号数目相等,

月设 E 中有 m 个左、右括号、F 中有 n 个左、右括号。

左括号和右括号个数均为 0, 当然相等。

归纳步骤: 设表达式 B 是通过 (2) 构造出来的,有 3 种构造方法:

(1) B = E + F; (2) B = E * F; (3) $B = (E)_{\circ}$

设表达式 $E \setminus F$ 包含的左、右括号数目相等,

且设 E 中有 m 个左、右括号,F 中有 n 个左、右括号。

在 B = E + F 和 B = E * F 时,B 中左、右括号数均等于 m + n;

在 B = (E) 时,B 中左、右括号数等于 m+1。

在 3 种情况下,构造出的新表达式 B 所包含的左、右括号数目仍然相等。
